Glitter Transfers	Place Iron to highest setting	20 Seconds	Cold <input type="checkbox"/>
Full Colour Transfers Stretch Transfers	Place Iron to Cotton Setting	10 Seconds	Warm to Cool <input checked="" type="checkbox"/>

INSTRUCTIONS (Full Colour Transfers, peel off the yellow backing before applying)

Simply place your garment onto a hard flat surface such as a laminated kitchen work surface, set your iron to its required temperature (**See Table**) making sure there is no water in your iron, place the transfer shiny surface face up and vinyl letters or number face down, where you want it on the garment, then cover the transfer and garment with a sheet of common baking paper (**Supplied**) and then place the iron on the paper holding it still with two hands applying reasonably heavy pressure on each section of the transfer for required seconds (**See Table**) (**DO NOT MOVE THE IRON AS IF YOU ARE IRONING SOMETHING**) just hold it still counting the seconds ie 1000, 2000, 3000 etc, do this until you have evenly covered the entire transfer area. When transfer paper is warm to touch, remove the baking paper and the transfers plastic backing paper peeling in a slow diagonal motion and **VOILA!!** your transfer will be firmly secured to your garment. If any of the transfer has not adhered then re-do the process.

TIP: We generally re-cover the transfer again with the baking paper and then firmly iron over in a normal ironing motion the entire area one more time for added insurance.

TIP: This process is best suited to garments that can be laid flat and do not have any high spots, or bumps that you can feel whilst running your hand over the garment when laid flat. If applying this process to a Polo Shirt or a Footy Shirt that has buttons or an embroidered logo on the front, it is best to use a ironing board to feed the garment onto, the ironing board has to have a hard flat surface so recommend you use a clean kitchen food cutting board of sufficient size placed onto ironing board, if your ironing board is not stable enough to apply pressure onto, then you may have to ask someone to secure the board whilst applying your transfer. You can also try just using the food cutting board fed between the garments front and back layers without using the ironing board which may work just as well.
